The skin is the largest organ in the body and plays many essential roles, including maintaining a protective barrier, providing immunity and communicating with the outside world. At the Division of Dermatology at Children's Hospital Los Angeles, we understand how impactful a skin condition can be on our patients and their families. Our pediatric dermatologists are fellowship-trained in the diagnosis and management of a wide range of skin conditions in infants, children and adolescents. We pride ourselves in joining compassion with up-to-date science to provide excellent care.
