Extra: Lives Outside the Hospital

A Knack for Facts Leads to “Jeopardy!”

by Vicki Cho Estrada

Sandy Hall, MSNc, RN-BC, manager of the Versant™ RN Residency in Pediatrics at Children’s Hospital Los Angeles, has a knack for remembering random facts, fortified by years of playing Trivial Pursuit with her family. Her talent was recently on display on a bigger stage when she appeared as a contestant on “Jeopardy!”

Hall, an avid fan of the long-running TV game show, decided to take the online test in April 2015. “I knew the odds were against me—over 100,000 people take the show’s online test every year, and from those who pass, only about 400 people get selected,” she says.

She was notified of an audition two months later and demonstrated her ability to quickly think on her feet—thanks to her many years working as a nurse—through a mock game with two other potential contestants. By August, Hall received word that she had been selected as a contestant, but due to scheduling conflicts, she wasn’t slated to tape the show until December.

That gave her time to study. Hall went on websites dedicated to preparing for the show and brushed up on a variety of topics, from Shakespeare and U.S. presidents to bodies of water and state nicknames. “I tried to learn all the U.S. senators and that almost broke me,” she says.

By the show’s taping, she felt prepared, but nervous. Her biggest fear was that there would be a medical category, and she would embarrass herself in front of her CHLA peers. But that didn’t happen. Instead, there were such categories as TV sitcoms, literature, unconventional warriors and even “Rotten Tomatoes” (all about tomatoes).

One of the trickier things for Hall was getting used to the game buzzer. “If you buzz too soon, you get locked out for a quarter of a second. I knew the answers to 80 to 90 percent of the questions, but unless you can get buzzed in, knowing the answer isn’t enough.”

During the show, which aired in January, Hall won a Daily Double, but had the incorrect answer in Final Jeopardy, placing third and winning a consolation prize of $1,000. She adds, “Obviously, I would’ve liked to have won, but I’m proud I held my own. ... It was a blast.”

Nurses in Action

Marilyn Mills: Using Her Culinary Skills for Good

by Vicki Cho Estrada

Marilyn Mills, RN, BSN, NE-BC, CRN, BC

Whether it’s preparing a full Greek dinner with spinach spanakopita, gyro and tzatziki sauce or a Hawaiian feast with a kalua pig roasted in an underground pit, Marilyn Mills, RN, BSN, NE-BC, CRN, BC, can cook up a storm.

Mills, a nursing manager in Radiology, has been using her culinary skills to not only feed her family, but also to help a variety of worthy causes. She has prepared more than 40 elaborate meals feeding 60 to 120 people for school and church fundraisers and nonprofit organizations.

“I like to be creative and make something people haven’t tried before,” says Mills, a self-taught chef and a certified food handler. “I want to surprise them; my goal is always to give them an experience and good food.”

Her foray into cooking for large crowds began 32 years ago when her daughter’s school wanted to hold a father-daughter banquet, but couldn’t afford a caterer. Mills stepped in and planned the menu, shopped for groceries and prepared dinner for 120 people in the school’s kitchen, charging only for supplies.

She later made meals for school fundraisers, weekend camps and nonprofit groups, including a carb-loading dinner for Up and Running Again, which helps homeless individuals and at-risk youth improve their lives by training for, and completing, a half-marathon. For the past few years, she has also prepared all the food for the annual brunch and lunch with Children’s Hospital Los Angeles’ chief nursing officer during National Nurses Week.

Mills scours recipe books and watches YouTube videos to get menu ideas and cooking tips. Unlike other chefs, she doesn’t test recipes before serving food items, and says, “Fortunately, I haven’t had any total flops.”

According to Mills, there are similarities between nursing and preparing meals for large groups. “The organizational skills and planning that I use every day in my job carries over into cooking. When you prepare large meals, you have to be organized and follow a timetable. You use these skills as a nurse as well. And, like nursing, anything can change when you’re cooking, so you have to be flexible.”
As a busy nurse and mom, Sue Bugsch, MSN, RNC-NIC, an education manager in the Newborn and Infant Critical Care Unit (NICCU), just couldn’t make the time for exercise. “I think I was afraid to get started,” she says. But after a diagnosis of breast cancer and six years of cancer medication, Bugsch felt like she “was 85 years old.” Things had to change, and she remembers the day they did—Oct. 5, 2015, when she went to a yoga class. She hasn’t turned back since. In fact, she recently completed a challenge of 31 yoga classes in 30 days.

“It’s changed my life,” says Bugsch. “For me, yoga is extremely relaxing and energizing.” Its benefits extend on the job and off, says Bugsch, a self-described Type A personality. “Yoga helps me think before I react.”

But after a diagnosis of breast cancer and six years of cancer medication, Bugsch felt like she “was 85 years old.” Things had to change, and she remembers the day they did—Oct. 5, 2015, when she went to a yoga class. She hasn’t turned back since. In fact, she recently completed a challenge of 31 yoga classes in 30 days.

For many nurses, the great outdoors provides a fun cardio playground. Delilah Dees, RN, BSN, public health nurse and case manager in the Newborn and Infant Critical Care Unit, hikes in Griffith Park or Runyon Canyon after work two or three days a week, and tries out different terrains and trails on weekends. She uses the Meetup app to find like-minded hikers. “You’re out in the fresh air, clearing your mind, and not taking the stress of the job home,” says Dees. “Plus, it’s free!” Finding a physical outlet is not only key to your health, it supports good nursing, she adds. “We need balance to be able to help the families who need us.”

Jeffrey Altizer, RN, BSN, Cardiothoracic Intensive Care Unit, also finds his release on a hilly trail—riding a mountain bike he built himself. He’s explored several western states, and routinely navigates the rocky, steep paths of the San Gabriel Mountains. “You need good insurance and good technical skills,” he jokes. Mountain biking helps give him added focus and confidence as a nurse. “You learn how you can challenge yourself and be rewarded for hard work,” he says. Plus, “you get to enjoy the simplicity of what’s around you.”

Mary Ellen Farr, RN, Surgical Admitting, swims four mornings a week with the U.S. Masters, a nonprofit organization comprised of adult swim teams, and competes in ocean swimming races in Hawaii and Southern California. This will be her 19th consecutive year competing in the Pier-to-Pier Race (Hermosa to Manhattan Beach). Swimming teaches her to be disciplined in every aspect of her life, she says. “And it gives me more clarity throughout the day.” It can provide a jolt of joy, too. On a recent ocean swim, she was joined by a friendly coach—a seal.

The blue Pacific also works its magic on Bernadette Perttula, RN, BSN, Operating Room, who started surfing at 16. To stay in shape to catch waves, she does aquatic conditioning at a local pool. Being on the longboard “is my alone time,” she says. “It gives me perspective.” She sees many parallels with her job. “In the ocean, you need to be able to anticipate what is coming and adapt to unexpected changes,” she explains. “The same is true with nursing. When something happens, you move from what you know and do your best.”
“It’s a great stress reliever, hitting that ball,” says Tejada, who at 5-foot-1-inch primarily functions as a “setter”—setting up shots—and also serves and receives. She loves the game’s strategy, energy and camaraderie. “The teamwork is very much like nursing,” she says. “You have your skill set but you also rely on your teammates.”

Marvin Mangahis, RN, BSN, Quality Department, found his passion in Brazilian jiu-jitsu when searching for a martial art for his son. The combat sport teaches a smaller person how to defend against a larger adversary using leverage and technique. Forty-five pounds lighter since he started, Mangahis is now a certified jiu-jitsu instructor. “It has changed my mindset about my health,” he notes. There’s a bonus. “My wife says I’m a much calmer person now.”

Melanie Guerrero, MSN, RN, CPN, clinical manager of Cardiovascular Acute Care, is equally devoted to the martial arts she practices—kickboxing and boxing. Already a “sporty person,” she was diagnosed with gestational diabetes during her second pregnancy. So she stepped things up by joining a kickboxing gym and is now hitting the bag and sparring one-on-one. Armed with new skills, she feels “more capable of protecting myself,” she says, and gets upset if she misses her workouts for even a day or two. “It gives me much more stamina at work and with my kids.”

Bugsch is continuing her healing yoga journey. “Exercise once seemed impossible,” she says. “Now I build my schedule around it. The trick is finding something you love.”

Hilda Rodriguez, RN, BSN, 4 East, tried the whole range of fitness classes—spinning, aerobics, Pilates, yoga, boot camp, ab classes. “I was bored,” she says, until she got addicted to CrossFit, a high-intensity workout that combines elements of cardio, weightlifting, gymnastics, core training and more.

Without CrossFit testing her limits several times a week, says Rodriguez, “I don’t function normally. I’m on edge, irritable.” Most of all, CrossFit teaches her to stay positive. “When things seem rough, you can still get to your goal. Crossfit helps me clear my mind, refocus and keep pushing.”

Melanie Guerrero, MSN, RN, CPN, clinical analyst on the KIDS Team, was a dedicated volleyball player from elementary school through college. Several years ago, the sport reentered her life when she started co-coaching her son’s team. Now she plays weekly on two teams, one women’s and one co-ed, at McCambridge Recreation Center in Burbank.

Celebrating the accomplishments and milestones of CHLA nurses

Publications
Eliza Drayle and Nida Oriza (Cardiothoracic Intensive Care Unit): “Tetralogy of Fallot With Absent Pulmonary Valve” and “Total Anomalous Pulmonary Venous Return.” Complete guidelines, Society of Pediatric Cardiovascular Nurses and Pediatric Cardiac Intensive Care Society websites, February 2016.

Monica Horn (Heart Institute): “Pediatric Cardiac Prehob.” International Society for Heart & Lung Transplantation, Links Newsletter, January 2016.

Presentations
Leticia Bautros (Post-Anesthesia Care Unit): “Los Angeles Cash for College CHAMPS Health Professionals Panel, November 2015; CHAMPS Nursing Careers Presenter, St. Mary’s Academy, January 2016.

Nancy Chang (Endocrinology): “Understanding Barriers to Self-Medication Among Latino Adolescents With Type 2 Diabetes,” Ellipse Global Study Coordinator Symposium, Rome, Italy, January 2016.

Robert Giesler and Cynthia Triana (Newborn and Infant Critical Care Unit): “Perfecting NICU’s IV Practice; Eliminating IVRelated Ulcers on Our Little Ones,” Coastal California Association of Neonatal Nurses Conference, February 2016.

JUSTIN LEON (OPERATING ROOM): “Evidence-Based Project on Double-Gloving in the OR,” Children’s Hospital Los Angeles, January 2016.

AMY STEFFIE LOHMAN (ANESTHESIOLOGY/RADIOTHERAPY): “Reductions of Same-Day Anesthesia Cancellations in FloSheet is compiled with the assistance of Karen Lampert (Pediatric Rehabilitation Medicine). In addition, we would like to thank Debby Jury (Post-Anesthesia Care Unit) for her invaluable contributions. Thanks, as well, to all the nurses who share items about their activities and achievements.
Voice of the Profession

Longtime Bonds Help Nurses Advance Their Education

by Vicki Cho Estrada

Anna Kitabjian, BSN, RN, CPN, PHN (6 East), never met Terry Varatta, a former nurse at Children’s Hospital Los Angeles who is remembered for her vision and compassionate care. But she feels a connection 30 years after Varatta left the hospital.

Last year, Kitabjian received the Terry Varatta Memorial Scholarship, a fund established by the Varatta family exclusively for CHLA nurses who are pursuing a master’s degree in nursing. She is among 28 recipients who have received the $1,000 scholarship since the fund was created in 2007.

“I am so incredibly thankful for the Terry Varatta Scholarship as it has helped me pursue a master’s degree in nursing. While I never had the privilege of meeting Terry, I know she was an amazing nurse, and so to have been awarded the scholarship she represents is an immense honor,” says Kitabjian, who is on track to receive her degree from University of California, Los Angeles, in 2017.

The family started the fund in honor of Varatta, who worked at CHLA from 1965 to 1985. “Terry always spoke fondly of her time at CHLA and would tell stories of the many friends and relationships she made that were a part of her life and memories forever,” says Joe Varatta. “We wanted to embrace and continue the legacy of those like Terry who consciously and fully give of themselves to heal those in need of medicine, kindness and humanity.”

In addition to the Varatta Scholarship, which is awarded twice a year, the John E. Anderson Endowment for Scholarships in Nursing is given to CHLA nurses who are working toward their master’s and doctorate degrees. The $2,000 annual scholarship was established in Anderson’s memory in 2013 by his widow, CHLA Board of Trustees Chair Emerita Marion Anderson, a longtime hospital benefactor.

“John was always interested in the work that nurses do,” Marion says. “He believed, as I do, that nurses are the core of what takes place in the hospital setting, from exceptional knowledge to compassionate care. John would be very pleased and proud of the great professionalism exhibited by our CHLA nurses each and every day. Education was and is extremely important to both of us, and what greater return could we hope for than an investment in our nurses.”

Applicants for both scholarships must complete an application and essay and submit a letter of recommendation. The materials are blind-reviewed by a selection committee comprised of: Kara Medina, RN (6 West), Christie Laciste, RN (Rehabilitation), Stephanie Brady, RN (Versant RN Residency), Yvette Martinez, RN (Cardiovascular Acute), Mary Alice Gajo (Pharmacy) and Miguel Aventino, RN (Post-Anesthesia Care Unit).

“Scholarship recipients are from all areas of the hospital,” says Suzanne Taylor, EdD, MSN, RN-BC, director of Clinical Education and Professional Development, who received the first John E. Anderson scholarship in 2013. “The scholarships mean so much because they are exclusively for CHLA nurses and recipients are selected by their peers.”

I am so proud of the seeds we have planted together. We have put in the long hours and the hard work and we have never lost focus of why we are here doing this work. It’s the kids. It will always be the kids. We work for them. I will forever be grateful for the opportunity to build my career here. I thank you for your camaraderie, humor, unit potlucks, working on Christmas and Thanksgiving, your professionalism and intelligence, for always seeking greater knowledge, for being the calm for parents facing their greatest fear, and for never giving up and always showing up.
Robert Giesler, BSN, RN, RNC-NIC, RRT, CPST

Robert Giesler, BSN, RN, RNC-NIC, RRT, CPST, is a former Navy officer with a big heart for the tiniest, most fragile patients at Children’s Hospital Los Angeles.

Giesler, a nurse in the Newborn and Infant Critical Care Unit (NICCU), began his career as a respiratory therapist, following in his father’s footsteps. He served in Operation Desert Shield and Desert Storm as a hospital foreman. The nurses he met while in the military became an inspiration for Giesler, who decided to go back to school when he completed his service.

“I always loved science and medicine and after working with so many incredible nurses, I knew this was what I wanted to do,” says Giesler, who earned his nursing credentials in 2002 and joined CHLA in 2004.

Giesler was also certain about the type of nursing he wanted to focus on—neonatal intensive care. “This is an intense environment,” he says. “But these babies have their whole life ahead of them and we can make a huge difference.”

In addition to his clinical work as a bedside nurse, Giesler has also been instrumental in developing an infant car safety program at CHLA. He was the first nurse at CHLA to be certified as a national child passenger safety technician. “As nurses, we spend a lot of time with our patients,” he says. “When they are ready to go home, we want to make sure they are absolutely safe in the car leaving the hospital.”

To balance the daily intensity of his job, Giesler, whose wife, Gigi, is also a NICCU nurse at CHLA, logs more than 1,500 miles a year on his bike. Camping, boating and fishing with this family are other favorite de-stressors. He also shares his insights into family life and staying healthy by blogging for CHLA’s RN Remedies series.

As he talks about his career in the NICCU, the term “heart and soul” comes up a lot. Each one of these tiny babies has a profound impact on Giesler, who is a father of two teenage sons. As a nurse, he says he sees his role as the one consistent person the families can talk to. “When parents are scared, nurses become the voice of comfort. They are the ones who can bring calmness and hope to keep the family grounded.”

What are his most rewarding moments? When the babies come back to visit as healthy, active kids enjoying school and everyday life. “Nothing can top that feeling,” he says.
