Children’s Hospital Los Angeles is ranked among the top hospitals in the nation for endocrinology and diabetes care on the U.S. News & World Report Best Children’s Hospitals list. As one of the largest pediatric endocrine programs in the country, the Division of Endocrinology, Diabetes and Metabolism at Children’s Hospital Los Angeles is pioneering pediatric care and clinical and basic research programs in diabetes, obesity, growth, bone metabolism and adrenal disease.

The Division provides comprehensive, state-of-the-art, interdisciplinary care, education and training to nearly 2,000 children with type 1 and type 2 diabetes and more than 4,000 patients with other endocrine disorders each year.

Our expert physicians continuously search for cures while implementing cutting-edge care, leading the way for children afflicted with endocrine disorders to live healthy, productive lives.

Our innovative, activity-based Kids ‘N Fitness Weight Management Program empowers children to make decisions regarding nutrition, exercise and lifestyle to prevent the greatest risk factor for type 2 diabetes in children. In addition, we provide education for all of our patients and their families.
Danielle Borut, MD
